

MARBLE & TRAVERTINE
Exterior 2024 Collection

About us

Located in Northern New Jersey, NT Pavers is a leading marble, travertine and porcelain manufacturer and distributor for both interior and exterior areas. As quarry owners, we take pride in bringing the best, first quality material and making sure the client gets the best possible version of the stone!

NT Pavers works with architectural designers, landscape architects, stores, and mason yards to fulfill every client's wish. We carry different types of natural stone and porcelain material including pavers, tiles, copings, veneer, ledger, mosaics, large and medium format slabs and much more!

For Architects and Designers

Do Not Miss Your Chance to Get Specified

CADdetails empowers you with high-quality design files presented in an elegant design library.

We let you save time and stop losing sales. We streamline the process of architects and designers accessing your products' design files and getting specified into projects.

Don't be edged out of construction projects because you do not have the right design files in front of the right professionals at the right time. Book a call with us today.

FAQ for Test Results Page

Q: Can travertine pavers be used in East Coast weather conditions?

A: Yes, travertine pavers are suitable for East Coast climates. Our test results show they are resistant to freeze-thaw cycles, meaning they do not crack or deform in extreme temperatures, which are common on the East Coast.

Q: Is marble strong enough for backyard installations?

A: Marble is a durable stone and our test results indicate that marble pavers have high compressive strength, making them strong enough for various backyard installations such as patios, walkways, and pool decks.

Q: What does the 'Absorption' value mean in the test results?

A: The 'Absorption' value refers to how much water the stone can absorb. Lower values indicate less absorption, which is beneficial for preventing damage and deterioration, especially in freezing conditions where water can expand and cause cracking.

Q: Are the stones tested for slip resistance?

A: Yes, our stones have been evaluated for their dynamic coefficient of friction, which measures slip resistance. The stones we tested passed this test, performed by the Tile Council of North America (TCNA), an IAS accredited lab, ensuring they provide a safer surface when wet.

Q: What does the 'Density' figure mean, and why is it important?

A: Density, measured in pounds per cubic foot (LBS/FT³), indicates the compactness of the material. Higher density typically suggests greater durability and stability, making the stone more suitable for high-traffic areas.

Q: Can I use these stones around my pool area?

A: Absolutely. The stones have shown resistance to freeze-thaw cycles and possess good friction coefficients, making them suitable for pool areas where the surface can become wet and slippery.

Q: Will marble or travertine stain or fade over time?

A: All natural stones have the potential to stain or fade over time, especially if exposed to certain chemicals or prolonged direct sunlight. However, sealing the stone can help protect against stains and UV-resistant sealers can reduce fading.

Q: How much weight can natural stone pavers support?

A: Natural stone pavers can support a considerable amount of weight. Compressive strength is listed in the test results, with some materials supporting over 24,000 psi, indicating they can handle the weight of outdoor furniture, grills, and heavy foot traffic.

Q: Do I need to seal natural stone pavers?

A: While our natural stone pavers are durable, sealing them can enhance their resistance to staining and extend their lifespan. It is generally recommended, especially in areas subject to harsh weather or frequent use.

Q: Where can I get the full official test results for these stones?

A: Official test results documents are available upon request. Please contact us, and we will be happy to provide you with all the detailed information you need for your project.

Disclaimer Notice: The test results shown are from standardized laboratory conditions and might not account for the variability of real-world settings. Our company disclaims all responsibility for any differences between these results and the actual performance of our products. It is imperative that marble pavers be professionally installed and sealed to maintain their quality and resistance to weather. Responsibility for the correct handling, installation, and ongoing maintenance of these pavers lies with the installation professional, and our company shall not be held accountable for any issues that may arise post-installation.

TEST RESULTS

Last updated in April of 2024

Absorption & Density		
Sample	Absorption	Density (LBS/FT3)
OLIVE GARDEN LIMESTONE	0,33	166
